District Heating and Cooling - A txtbook for every energy professional serious about efficiency, climate change and cities

By R. P. Thornton

If you are responsible for planning the energy future for a city or community, reading this text book should be your first order of business. The authors have created a highly informative and sequential guidebook, reflecting over 30 years of experience and insight, that lays out in thoughtful steps, a wholesale curriculum for planning, designing, constructing and optimizing district heating and cooling systems for cities, communities, campuses and clusters. District heating and cooling (also known as district energy) is a highly efficient and reliable approach to providing useful energy to multiple buildings, or entire cities, that can reduce harmful emissions, conserve fuels, reduce water usage and cut primary energy waste. This textbook explains in detail the technologies and best practices and helps the reader to understand not only complex economic models but essential energy protocols that have too long been the mystery of the district energy industry. As a 30 year professional in this field myself I am very pleased to recommend this book "District Heating and Cooling" as the essential industry textbook for experienced industry veterans, newly ensconced professionals and for those individuals seeking practical energy solutions for our over-populated planet.

Robert P. Thornton,

President & CEO, International District Energy Association (www.districtenergy.org)
