I went from "probably going to fail or drop calc" to earning a low A on the first exam because of this book.

By Brian Kerr

I'm 38 and I want to get my MBA, but I didn't take Calc in undergrad and the school I want to attend requires Calc as a prerequisite. I took precalc in undergrad but just didn't get around to Calc I because it wasn't required for my major. So, I'm "the old guy" in my Calc class. After the first day of class, I was genuinely concerned that I'd fail and, as a result, not be able to do the MBA program. So much algebra and trig! Serious high school math. Thankfully, I noticed an ad for Just-In-Time Algebra and Trig in the front of my Calc book. I ordered the book from Amazon, did the first several chapters right away and then did a few more chapters here and there over the next few weeks. I just had my first Calc exam last week and guess what? I got a low A on the exam. And I thought I was going to fail!

If my story sounds anything like yours, just get the book and do the work. Good luck!

Well done

By bmiddle

I took my first calculus course after not having taken an algebra course in 7 years, and after never taken trig or pre-calc. I would have failed miserably without the help of this easy to read and concise book. I still struggled to survive calculus but this book helped me stay afloat.

Great transaction

By Kim Amaral

The book arrived faster than expected. This is a great book to use as a refresher of concepts that you must have going into Calculus. Not a primary textbook, but a simple crash refresher.
