Worked!

By Jennifer Dickey

This book was recommended by my pediatrician after we had some trouble with potty training my son. It's a messy couple of weeks, but I think it's more efficient than other methods if you have the energy.

This Really Works

By Mum of 6 {ages 8 and under}

I started potty training my 2 yr. 2mo old in May 2010. I followed this guide but didn't push or pressure my toddler if she didn't follow it to a T. She was fully and completely potty trained in 13 days. We have about one (possibly two) accidents a week but the author states that is to be expected if training closer to age 2 than 3. The book is laid out for Day 1, Day 2, Day 3, etc. and what to anticipate. My toddler was on each day for 2-3 days before seeing progress. The author gives great insight and advice as to what signs to look for BEFORE potty training to know that your toddler is in fact ready, then she gives ideas and a plan for preliminary steps to take, BEFORE potty training to get your toddler ready. Then she lays out a daily plan

reminding you to not ever be frustrated or annoyed with your toddler if they have accidents. My daughter had accidents every time for the first two days, then moved slowly to some accidents, some successes on the potty, before moving to mostly successes, and within 13 days was telling me when she needed to go, and going successfully every time. I have found that the one or two times she may have an accident during the week is if she is engaged in play and not thinking about sitting on the potty; the author recommends if you see this trend to just remind your toddler for a while when engaged in play to go to the toilet or potty. Once my toddler got used to sitting on the potty over the next week, I then began to have her sit on the toilet. She uses the toilet primarily now rather than the potty.

This book is easy reading, has case studies throughout, gives great insight and advice, and it all worked for us. When I thought it was not going to work, my husband kept encouraging me to keep going. The days are long at first but if you persevere you will do it. The biggest advice the author gives is to not put your child back in nappies/diapers once you start potty/toilet training as this causes confusion, and can delay fully being trained for 6 months or so. Although it was hard work and nerve-wracking when first taking our child out, this is what caused us to succeed in 13 days. Our toddler just had to learn the sensation of needing to go to the bathroom, then learning to recognise it ahead of time, with enough time to go. We only use pull ups at night now until we transition, which will be about age 3. We don't use pull ups during the day as I have our toddler go to the bathroom before taking her nap, and as soon as she wakes up, and she also woke up dry from her naps for a long time before we began potty training (a good sign she was ready to potty train).

I would recommend this book if you're serious about potty training. A lot of people told me 2 yr 2 mo. is too young and she wouldn't be able to be fully potty trained. There's a saying if you start potty training at 2 you will be finished at 3, and if you start potty training at 3 you'll be finished at 3. My daughter is finished potty training and she is now 2 yr. 3 mo.

(UPDATE July 2011): My daughter has only had a handful of accidents since being potty trained. I just followed this same concept for my 23 mo. daughter and she was potty trained in less than a week. Of course she had the benefit of watching her older sister and wanting to be just like her. However, once again, I take my hat off to Gina Ford who gives clear and specific guidelines for helping your toddler be potty trained quickly and successfully.

(UPDATE April 2013): I used this same technique for my third daughter, age 2 yr 3 mo and she was potty trained in just a couple of days. Of course, she like her older sister, had the benefit of watching someone else and wanting to be like them. I am certainly grateful I have had this book. It has worked like a charm on all three of my girls, who are all very different in personality.

Keys to success: do the preliminary things to be sure your child is ready, and don't use pull ups as it causes confusion. I use pull ups at night (and during nap time for the first few days) until age three, and we call them "special night knickers". If they wake up in the night needing to go to the bathroom, I take them. I don't encourage them to use the pull ups, they are just there as a safety net for me not having to wash bed linens. Having four children ages five and under I am already doing enough laundry. The pull ups, I have found, are 99% of the time dry, and for the one in many months that it isn't, I sigh relief. :)

Excellent Book

By A. Fisher

If you are willing to put in the time and follow her strict guidelines, then it is a worthwhile system. My daughter was trained in a week at 25 months.
